

CASE STUDY

Securing Compliance and Quality for a Medtech Breakthrough

To fuel rapid growth, medtech startup Omniscent Neurotechnology (o8t) chose AODocs to **accelerate its go-to-market strategy, strengthen security, and meet the stringent requirements of research and clinical partners**. Chief Clinical Officer Arie Henkin says AODocs is a scalable, user-friendly, and pre-validated solution that supports growth from day one.

Challenges

Fragmented Systems => Compliance Risks and Inefficiencies

Operating in the highly regulated medtech and biotech industries, o8t sought to avoid the time-consuming and inaccurate management of critical documents containing sensitive clinical data such as hospital questionnaires.

Lack of modern DMS => Increased Risk Exposure

Relying on manual processes for document handling, access control, and audit trails can lead to non-compliance risks. Without a standardized system, o8t could face inconsistent practices that undermine efficiency and increase operational costs.

Solutions

Customizable, Pre-validated, and user-friendly

AODocs provided a customizable, pre-validated platform designed to scale with Omniscent Neurotechnology's growth. Its user-friendly interface allowed teams to swiftly adopt it and start working efficiently from day one, ensuring streamlined operations without compromising compliance or productivity.

Automated Workflows and Notifications

The platform's automation capabilities reduced manual interventions, providing precise control over document lifecycles. Notifications ensured stakeholders remained aligned, improving both speed and accuracy.

Streamlined Document Management with Access Control

AODocs' intuitive interface allowed o8t to quickly implement standardized, step-by-step processes for managing documents and workflows. Robust access controls ensured that only authorized personnel could access sensitive information, meeting stringent security and compliance requirements.

Continuous Improvement, Auto-Upgrades, with Validation

With AODocs' continuous development and automatic upgrades, o8t benefited from the latest features without disrupting daily operations. It allowed the organization to focus on its core business instead of managing outdated or fragmented systems.

Wins and Results

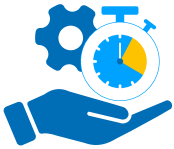

Improved Compliance and Security

o8t reduced compliance risks and improved its ability to meet regulatory requirements, by standardizing processes and implementing rigorous access controls to crucial and sensitive clinical information.

Enhanced Visibility and Control

With AODocs, o8t achieved a consolidated view of its document management processes, making audits and compliance reviews faster and more reliable.

Scalability and Speed

The platform's flexible architecture allowed o8t to scale its go-to-market operations without compromising performance or security.

“

During an audit, we needed to pull up backup records urgently. Within a few hours, we had exactly the response we needed for the audit. So rapid and accurate at the same time.
