

CASE STUDY

Automating Secure HR & Financial Report Distribution at Community Health Systems (CHS)

Industry: Healthcare

Employees: 80,000+ across 79 hospitals

Challenge: Secure, automated delivery of sensitive HR & financial reports at scale

Business Challenge

CHS needed to distribute confidential HR and financial reports to hundreds of locations, ensuring each facility only accessed its own data. The legacy workflow involved manual report pulls, email distribution, and limited audit visibility, exposing the organisation to operational and compliance risk.

Solution with AODOcs

AODOcs deployed an automated, metadata-driven workflow ensuring secure and scalable report delivery using entity-based access rules, bulk ingestion, and audit-ready governance.

Capability	Description
Automated ingestion	SQL-generated reports imported directly to AODOcs
Bulk tooling	High-volume import without manual uploads
Entity-based permissions	Facility codes determine report access
Metadata-driven controls	Permissions and classification auto-applied
Secure access	Reports accessed centrally via AODOcs
Audit visibility	Complete access and compliance logs

Results & Impact

Eliminated manual report distribution cycles

Facility-specific access enforced automatically

Full traceability and audit readiness

Centralized secure storage replaces email distribution

Architecture supports future retention automation

“

AODocs transformed report delivery from a manual, emailed process to a fully automated, secure pipeline tied to entity codes.
